

# X02 Counter Audibility Systems

## X02 Counter Audibility Systems

Relatively inconspicuous sound systems which overcome the problem of communicating through a glass screen. The basic X02 system comprises two of any type(s) of loudspeaker, two of any microphone(s) and a stereo amplifier box with power supply (H60 W200 D150mm). Alternatively a combined microphone / loudspeaker console can be supplied for the clerk's position. If required an induction loop system can be incorporated allowing hearing aid wearers to hold a conversation with a clerk.
